

Important information for the creation of PDF files of printing documents for Kepler Medien Gruppe

Please note:

1. Do **not** create PDF files from the generation program, even if the program manufacturers offer this function.
Only use Acrobat Distiller.
2. **Only** use CMYK image data (only original data; pixel image resolution 300 dpi).
3. **Only** use type 1 PS fonts or TrueType fonts.
Do not combine them if at all possible.

Procedure:

1. The file that is needed - **Belichtung(CD).joboptions** - can be downloaded from our Web site (www.keplermediengruppe.de/pdfopt_e.html) for Distiller 4.x and 5.x. We are, however, glad to send it to you instead. Please copy this file into the folder Acrobat>Distiller>Settings.
2. Then please print from the generation program into a file (a Postscript file *.prn or *.ps is generated as a result).
 - 2.1. Printer: Acrobat Distiller.
 - 2.2. Paper dimensions: own (created dimensions + 10 mm on each side, including 3 mm bleed. For A4, this would mean: 230 x 317 mm).
 - 2.3. Resolution 2,400 dpi.
 - 2.4. General rule: no colour separations, but registration and cutting marks.
Individual pages!
3. Start Distiller. Choose **Belichtung(CD)** under Settings.
4. Move the Postscript file (*.prn or *.ps) to the opened Distiller window or open the file.
5. Check the generated PDF document to see if it is the right size and if all the page elements are present and the fonts have been incorporated.
6. Print out the PDF document and send it to Kepler Medien Gruppe with the file (see the information about digital printing documents in the media pack).

Special features:

It is not possible to cover all the special features, particularly of Office programs, here. However, please do not hesitate to contact us if you have any questions and problems.
